Telemetry User Navigation Enhancements (Quick Guide)**

For Desktop and Tablet users, the default page now includes several tools to make navigating large customer lists faster and easier.
Below is a simple guide to the features now available.

---

1. Floating "Sites" Menu

A small **Sites** ▾ button appears in the lower-right corner of the screen.

- Click it to open a panel containing the full list of sites

- The panel stays visible while you scroll

- Click anywhere outside the panel to close it

- Useful for jumping directly to a specific customer without scrolling the page

---

2. Search Within the Sites Panel

At the top of the floating panel is a search box.

- Type the first letter or first few characters of a site name

- The list instantly filters to matching sites

- Clear the box to return to the full list

- Great for customers with many sites across multiple regions

---

3. Keyboard Letter Jump (A–Z)

You can now jump directly to a section of the page with a single key press.

- Press **any letter key** (A–Z)

- The page scrolls to the first site beginning with that letter

- Example:

  - Press **S** → jumps to the first starting an S

- o Press **B** → jumps to the first site starting a B

- Works anywhere on the page

- Does **not** trigger while typing into search boxes or forms

---

4. "Back to Menu" Button

A small **Back to menu** pill appears in the bottom-right once you scroll down.

- Click it to instantly return to the top of the page

- Useful when navigating large sets of sites

- Always available without interfering with the page content

---

5. Automatic Focus When Opening the Sites Panel

When you click **Sites** ▾ :

- The search field inside the panel is automatically focused

- You can start typing straight away

- No need to click inside the search box

Summary

These enhancements are designed to make navigating large customer lists quicker and smoother, especially for power users who manage dozens or hundreds of tank sites.

- Floating Sites Menu = quick jumping

- Search = instant filtering

- Keyboard jump = fastest navigation method

- Back to menu = return to top without scrolling

- **Additional Tank Display Features**

- The tank cards on the All Sites (default) page now include two helpful visual tools:

- _____

- **1. Tank Information Tooltip ("i" icon)**

- Each tank now has a small **information icon** (ⓘ) in the top-left corner of the tank graphic.

- **HOVER over** this icon to view a detailed breakdown of the tank's current status.

- The popup includes:

- **Live level value**

- **Current percentage**

- **Re-order level**

- **Critical low level**

- **High level alarm point**

- **Max fill level**

- This gives the user a quick view of all configured alarm thresholds and tank parameters **without leaving the page** or opening TankDetail2025.

- **Useful for:**

- Operators checking alarm logic

- Verifying correct tank setup

- Support teams diagnosing configuration issues

- Customers wanting more transparency around alarms

- _____

- **2. "Filling Now" Indicator (Blue square)**

- A new **blue pulsing square indicator** appears on a tank when the system detects that the tank is actively **filling**.

- This indicator overrides the flow-dot logic:

- **Blue square = Filling Now**

- **Green dot = Flow Enabled (but not filling) if setup**

- This allows users to instantly identify tanks that are actively receiving product.

- **Notes:**

- The indicator updates dynamically based on your flow logic and polling data

- It does not depend on percent change; it uses the configured flow/fill flags

---

- **3. Benefits of These Additions**

- Less cross-navigation between pages

- Faster troubleshooting

- More transparency for customers

- More modern and intuitive display
